## HOME WORK-2.

(1)

(a)

My Initials are G R.

(b)

0	1	0	0	0	1	1	1	0	1	0	1	0	0	1	0
G					R										

G	R
$x^{14} - x^{10}x^9x^8 - x^6 - x^4 - x^1$	$x^{10}x^9x^8 - x^6 - x^4 - x^1$

(c)

G	R	CRC
$x^{18} - x^{14}x^{13}x^{12} - x^6 - x^8 - x^5$	$x^{10}x^9x^8 - x^6 - x^4 - x^1$	0 0 0 0 0

∴ The Message Polynomial is,

$$x^{18} + x^{14} + x^{13} + x^{12} + x^{10} + x^8 + x^5.$$

(d)

Polynomial is,  $0x^{13}$ .

Polynomial in Binary is, 1 0 0 1 1.

Polynomial in Exponential is,  $x^4 - x^1 x^0$ .

∴ The Polynomial in Exponential is,

$$x^4 + x + 1.$$

(c)  $x^4 + x + 1 \overline{)x^{18} + x^{14} + x^{13} + x^{12} + x^{10} + x^8 + x^5}$

$(x^{14})$   $\overline{x^{18} + x^{15} + x^{14}}$

$(x^{11})$   $\overline{x^{15} + x^{12} + x^{11}}$

$(x^9)$   $\overline{x^{13} + x^{10} + x^9}$

$(x^7)$   $\overline{x^{11} + x^8 + x^7}$

$(x^5)$   $\overline{x^9 + x^7 + x^5}$

$(x^3)$   $\overline{x^9 + x^6 + x^5}$

$(x^2)$   $\overline{x^7 + x^4 + x^3}$

$(x^0)$   $\overline{x^6 + x^3 + x^2}$

$\overline{x^4 + x^2}$

$\overline{x^4 + x + 1}$

$x^2 + x + 1 \rightarrow \text{Remainder}$ .

0 | 1 1 1  $\rightarrow$  CRC

(f.)

G										R				CRC				
0	1	0	0	1	1	1	0	1	0	1	0	0	1	0	0	1	1	
-	$x^8$	-	-	$x^4$	$x^3$	$x^{12}$	-	$x^6$	-	$x^8$	-	-	$x^5$	-	-	$x^2$	$x^1$	$x^0$

∴ The Full binary message we will send including CRC is,  $x^{18} + x^{14} + x^{13} + x^{12} + x^{10} + x^8 + x^5 + x^2 + x^1 + x^0$

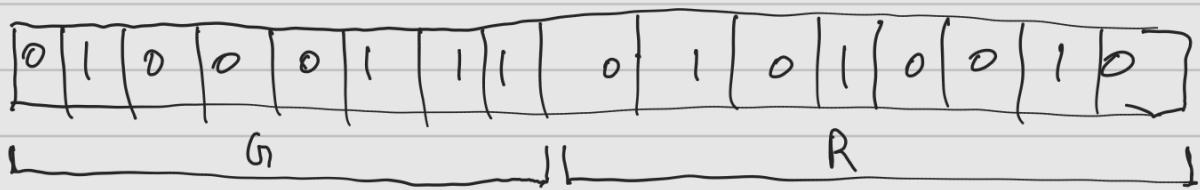

Verification :-

$$\begin{aligned}
 & x^{14} + x + 1 \\
 & (x^{14}) \quad x^{18} + x^{14} + x^{13} + x^{12} + x^{10} + x^8 + x^5 + x^2 + x^1 + x^0 \\
 & (x^{11}) \quad x^{15} + x^{13} + x^{12} + x^{10} + x^8 + x^5 + x^2 + x^1 + x^0 \\
 & (x^9) \quad x^{13} + x^{10} + x^9 \\
 & (x^7) \quad x^{11} + x^9 + x^8 + x^5 + x^2 + x^1 + x^0 \\
 & (x^5) \quad x^{11} + x^8 + x^7 + x^5 + x^2 + x^1 + x^0 \\
 & (x^3) \quad x^9 + x^6 + x^5 \\
 & (x^1) \quad x^7 + x^6 + x^2 + x^1 + x^0 \\
 & (x^0) \quad x^7 + x^4 + x^3 \\
 & \qquad\qquad\qquad x^6 + x^4 + x^3 + x^2 + x^1 + x^0 \\
 & \qquad\qquad\qquad x^6 + x^3 + x^2 \\
 & \qquad\qquad\qquad x^4 + x + 1 \\
 & \qquad\qquad\qquad x^4 + x + 1 \\
 & \qquad\qquad\qquad 0 \rightarrow \text{Remainder} \quad (\text{Hence verified})
 \end{aligned}$$

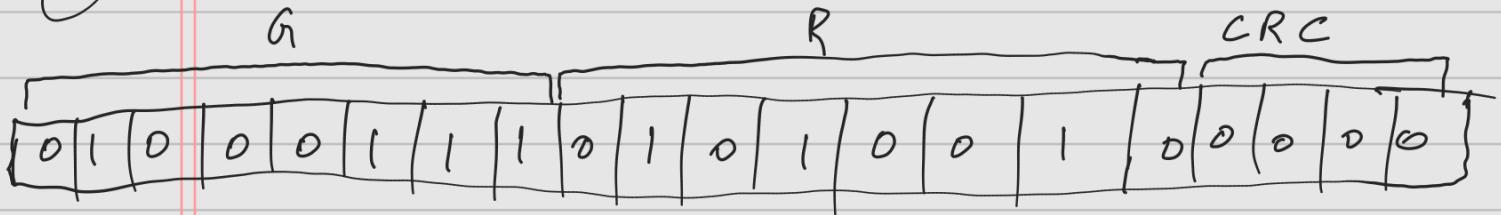

(2)

a) My Initials are GR.

b)

c)

Polynomial is,  $x^3$ ;

Polynomial in binary is, 100 11.

d)

$$100\ 11 \mid 01000\ 111\ 010\ 100\ 1\ 00000$$

left shift until First Bit is 1;

$$100\ 11 \mid 1000\ 111\ 010\ 100\ 1\ 00000$$

now, XOR the Binary Bits with Polynomial Binary with 0's after.

$$100\ 11 \mid 1000\ 111\ 010\ 100\ 1\ 00000$$

$$\oplus 100\ 110000\ 00000\ 00000$$

$$0001011010100100000$$

Continue the process;

$$100\ 11 \mid 1011010100\ 100000$$

$$\oplus 1001100000000000$$

$$0010110100100000$$

$$100\ 11 \mid 10110100100000$$

$$\oplus 1001100000000000$$

$$001011001001000000$$

$$\begin{array}{r}
 10011 | 101100100000 \\
 + 100110000000 \\
 \hline
 001010100000
 \end{array}$$

$$\begin{array}{r}
 10011 | 101010000000 \\
 + 100110000000 \\
 \hline
 001100000000
 \end{array}$$

$$\begin{array}{r}
 10011 | 110000000 \\
 + 10011000 \\
 \hline
 010110000
 \end{array}$$

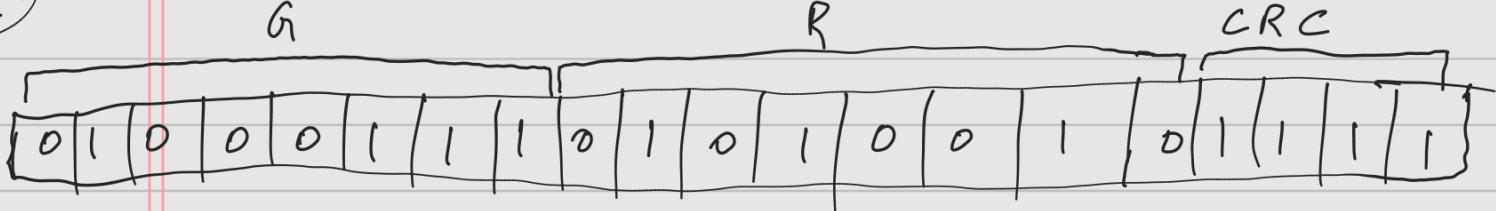

$$\begin{array}{r}
 10011 | 1011000 \\
 + 1001100 \\
 \hline
 001010100
 \end{array}$$

$$\begin{array}{r}
 10011 | 10100 \\
 + 10011 \\
 \hline
 001111
 \end{array}$$

$$\begin{array}{r}
 10011 | 11100 \\
 + 10011 \\
 \hline
 01111
 \end{array}$$

$$\begin{array}{r}
 10011 | 1111 \rightarrow 4\text{-bit C.R.C}
 \end{array}$$

(2)

09/07/22

(3)

0 &  $(2^n - 1)$

when,  $n = 1 \Rightarrow (2^1 - 1) = \underline{1} \rightarrow$  First collision

when,  $n = 2 \Rightarrow (2^2 - 1) = \underline{3} \rightarrow$  Second collision

when,  $n = 3 \Rightarrow (2^3 - 1) = \underline{7} \rightarrow$  Third collision.

$\therefore$  we have to choose a Random number between  
0 & 7.

(4)

For 1<sup>st</sup> Attempt :-

0 and  $(2^n - 1)$        $\begin{matrix} 0, 0 \\ 0, 1 \end{matrix}$  ;  $\begin{matrix} 0, 1 \\ 1, 0 \end{matrix}$  ;  $\begin{matrix} 1, 0 \\ 1, 1 \end{matrix}$   $\Rightarrow \frac{1}{4} = 0.25$  Probability

0 and  $(2^n - 1)$       For 2<sup>nd</sup> Attempt :-

$\begin{matrix} 0, 0 \\ 0, 1 \\ 0, 2 \\ 0, 3 \end{matrix}$  ;  $\begin{matrix} 0, 1 \\ 1, 0 \end{matrix}$ ;  $\begin{matrix} 0, 2 \\ 1, 1 \end{matrix}$ ;  $\begin{matrix} 0, 3 \\ 1, 2 \end{matrix}$ ;  $\begin{matrix} 1, 0 \\ 1, 1 \end{matrix}$ ;  $\begin{matrix} 1, 1 \\ 1, 2 \end{matrix}$ ;  $\begin{matrix} 1, 2 \\ 1, 3 \end{matrix}$

$\Rightarrow \frac{5}{8} = 0.625$  Probability

For 3<sup>rd</sup> Attempt :-

0 and  $(2^n - 1)$        $\begin{matrix} 0, 0 \\ 0, 1 \\ 0, 2 \\ 0, 3 \\ 0, 4 \\ 0, 5 \\ 0, 6 \\ 0, 7 \end{matrix}$  ;  $\begin{matrix} 0, 1 \\ 1, 0 \end{matrix}$ ;  $\begin{matrix} 0, 2 \\ 1, 1 \end{matrix}$ ;  $\begin{matrix} 0, 3 \\ 1, 2 \end{matrix}$ ;  $\begin{matrix} 0, 4 \\ 1, 3 \end{matrix}$ ;  $\begin{matrix} 0, 5 \\ 1, 4 \end{matrix}$ ;  $\begin{matrix} 0, 6 \\ 1, 5 \end{matrix}$ ;  $\begin{matrix} 0, 7 \\ 1, 6 \end{matrix}$ ;  $\begin{matrix} 1, 7 \\ 1, 7 \end{matrix}$

$\frac{13}{16} = 0.8125$  Probability

(5) → I can detect and prove if they are cheating the system, by implementing certain wait times between retries and the number of retries, as it depends upon our use case and network condition.

(6) NO, we cannot assume that the device wanting to send the data to the base station is disconnected because, the device is connected to the network with multiple connections and may occur network discrepancies.

→ I can send the message now as I have the Clear to Send (CTS) Request because we don't have to wait for a Request to send (RTS) to send the data and hence we can send it right away.

(7) The DST MAC address is set as '12'. It tells the switch to broadcast the IP address with MAC address's destination so that the ARP responds with the intended IP provides the MAC address.

(8) When we connect to an unsecured (open) Wi-Fi, we should be careful not to send any important (or) personal details through the network as it is not encrypted, that means the data can be seen (or) accessed by anyone, hence we get a warning before connecting to this network.

As we connect to a secure Wi-Fi network, it encrypts the transmission and hence it is secure and no one can interpret the transmission, and hence we don't get the warning.

- (9) There are multiple ways to prevent ARP poisoning, by using Encryption; VPN's.

Encryption:- when the traffic is Encrypted, the attacker would have to go to the additional step of tricking the target's browser into accepting an illegitimate certificate.

VPN'S:- VPN can be a reasonable defense for individuals, but they are generally not suitable for larger organizations.

- (10) There are multiple scenarios where a switch would have to drop the frames.

1<sup>st</sup> Scenario:- when the switch reaches its maximum buffer load, then it has to drop the frames, because it can't handle more than that of the buffer.

2<sup>nd</sup> Scenario:- If both the source and the

destination of the MAC address is found in the same port, then the switch will need to drop the frame.

Because a switch will never send a frame back out the same port it came in on.

→ The best way to measure a frame loss is using "ping". to send a large number of pings to the destination and look for failed responses.
